a'
In the section for storing programs (MEb) of the memory ME, there are stored a plurality of manufacturing (working) programs (a, b, c and so on) corresponding to a plurality of processes performed in the processing unit CPU (the offset spinning process, oblique spinning process, and coaxial spinning process, according to the present embodiment), among which a predetermined manufacturing (working) program is selected by the processing unit CPU to be executed. As a result, the products will be manufactured in such a manner as described in a published European Patent application No. EP1053799A2. Those manufacturing (working) programs may be stored in the memory ME of the controller CT as
